

GARADOR

Guardian Range

1 Lock Body Protection

A reinforcing plate has been added to the lock body to prevent attack against the locking mechanism. This new plate protects both the lock body and the central locking rod anchor points.

2 Anti-Snap Cylinder

The standard cylinder has been changed for a new anti-snap version which also incorporates a sacrificial front. The new cylinder is designed to prevent entry even after an attack.

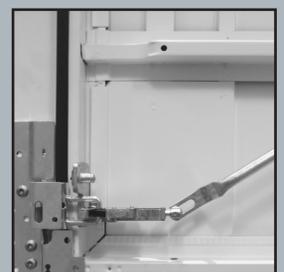

3 High Security Bracing

Braces at the back of the door have been increased from 2 as standard to 8 braces for extra protection. The number of spot welds has been increased by more than 70, further securing the door skin.

4 Improved Lock Security

Additional plates added to the base corners protect the bottom locking points of the door. These plates ensure the bottom latches remain intact even under extreme attack to prevent access.

UK's only SBD Up & Over Door
The UK's first range of Up & Over garage doors to meet the SBD accreditation. This new Guardian Range of doors have been engineered to offer even greater security to meet STS202. Currently available in the above two designs with either Retractable or Canopy gearing options and a choice of 7 standard colours. In addition, Garador can also offer a range of front entrance doors which are also SBD certified.
