Responsibility for generations

The Hörmann family business has over 85 years of experience as a construction component specialist. This gives us an obligation to both current and future generations. That's why environmental responsibility plays such an important role for us. With this in mind, we develop innovative solutions for sustainable products and intelligent environmental protection.

“A GOOD REPUTATION MUST BE EARNED.”

August Hörmann

In keeping with the tradition started by the company's founder, the Hörmann brand is a true promise of quality and, with sales of over 20 million doors and operators, is one of Europe's most successful suppliers. Due to the comprehensive international sales and service network, Hörmann is your strong partner for high-quality construction components.

WE THINK AND ACT GREEN. As a family business, we are very conscious of our responsibility to future generations. The Hörmann climate protection strategy aims to reduce and avoid CO₂ emissions. We cover 100% of our electrical power needs at all European production locations with purchased green electricity. We are also investing in a clean future with other measures such as the use of recycled paper, CO₂-neutral postal shipping and the recycling of transport packaging to save more than 75,000 tons of CO₂ every year. We work with ClimatePartner to offset the emissions that we do generate by supporting certified climate protection projects. In particular, we offset all CO₂ emissions produced in manufacture of products for residential construction as standard.

You can find further information at

Brand quality made in Germany

The family-owned company Hörmann offers all important construction components for building and renovating projects from a single source. We manufacture in highly specialised factories using state-of-the-art production technologies. Our employees work intensively on new products, continual further developments and improvements to details. The results are patents and one-of-a-kind products you can depend on.

LONG-LASTING. GUARANTEED. All doors are developed and manufactured by Hörmann. Endurance tests under real conditions ensure mature series products with Hörmann quality. For this reason and thanks to quality assurance without compromise, you can enjoy a Hörmann residential internal door for years to come. You are literally choosing a door for life.

CONVINCING PREMIUM WORKMANSHIP. For the door and frame construction, we rely exclusively on high-quality timber materials. Screw connections guarantee an excellent fit and seamless frame appearance. Frame reinforcements in the door leaf and sturdy door fittings ensure high stability and resistance. The modern, in-house production technology for the Duradecor surface finish impresses with consistently high quality and an impact resistance that is on average 48% better* than that of tested CPL surfaces of other manufacturers.

  	
KURZBERICHT	
Auftrags-Nr.: 2713082-2013 Seite 1 von 3	
Auftraggeber (AG):	Hörmann KG Verkaufsgesellschaft Upheider Weg 94 - 98 33803 Steinhagen
Auftrag vom:	11.03.2013
Prüfgegenstand:	5 Türblätter mit CPL-Beschichtung (Variante 1 + 6) verschiedener Hersteller 3 Türblätter mit Duradecor-Beschichtung (Variante 7 - 9) von Hörmann
Problemnahme:	Anlieferung durch AG am 14.03.2013
Prüfauftrag:	Durchführung ausgewählter Prüfungen an Türblattoberflächen
Prüfgrundlagen:	<ol style="list-style-type: none"> 1. Bestimmung der Fleckenunempfindlichkeit nach EN 12720/ DIN EN/TS 16209 2. Bestimmung des Verhaltens bei Stoßbeanspruchung mit einer kleinen Kugel gemäß den Prüfbedingungen der EN 438-2:2005, Abschnitt 20 3. Bestimmung der Kratzfestigkeit gemäß EN 15186 Verfahren B 4. * except Duradecor ultra matt

Premium quality that you can feel in form and design

Your interior style sets the tone! Are you looking for residential internal doors that harmonise with your home? Get ready to be impressed by the high-quality Duradecor surface finish with vibrant colours, perfectly reproduced timber decors and expressive textures. You can also choose from numerous real lacquer surface finishes and real wood veneers. Or you can design your residential internal doors yourself with the paintable priming film. It doesn't get any more individual than that!

**Extremely
impact-resistant**

PERMANENT DURABILITY. With an impact resistance that is on average 48% better, the high-quality Duradecor surface finish is vastly superior to CPL surfaces from other manufacturers. It is also especially easy to clean, heat-resistant and almost as robust as a kitchen worktop.

No fingerprints

ULTRA MATT. Fingerprints on residential internal doors? Not with Duragrain ultra matt! That's because this surface finish combines high resistance to fingerprints and other soiling with an exquisite matt deluxe appearance in a previously unattainable matt finish. When it comes to both aesthetics and feel, the ultra matt surface finish is in a league of its own!

**Vibrant colour
coating**

VIBRANT COLOUR EFFECT. The lacquered surface of our timber doors has a classic and high-quality look. The even, multi-layer coating on the whole unit, made up of the door frames and door leaf, results in a uniform surface finish and a seamless edge transition. The deep and brilliant colour effect is truly impressive.

Impressive right down to the tiniest detail!

We want our residential internal doors to impress you right down to the tiniest detail. You can enjoy your Hörmann residential internal doors for years to come thanks to clever features such as the 4Protect edge guard or our light-impermeable seal that blocks out light from an adjoining room for an undisturbed and restful night's sleep.

**4Protect
edge guard**

RESISTANT EDGE. The 4Protect edge guard on flush-closing doors and rebated doors with angular edges offers a high resistance to impact, wear and scratches. This means that doors with a Duradecor surface finish are ideally protected against everyday wear and tear.

SEAMLESS WHITE. The rebate edge of all doors with a white Duradecor surface finish is specially coated for a seamless appearance. In addition, the 4Protect edge guard ensures a seamless transition to the door leaf in doors with angular edges. You can enjoy a continuously white door view without the bothersome unsightly edges that standard doors have.

Only from Hörmann

Patent pending

LIGHT-IMPERMEABLE WHITE SEAL.

Hörmann's brand quality impresses with exquisite details. Take the light-impermeable seal, for example. With no visible light gap in our flush-closing doors, you'll no longer be disturbed by light from the adjoining room. This seal is only available as optional equipment for on-site fitting from Hörmann.

4Protect edge guard with seamless appearance on flush-closing doors and rebated doors with angular edges

The optional light-impermeable seal blocks out light from the adjoining room.

The long-lasting frame

Our high-quality timber and steel frames give your home twice the pep: the elegant, stylish appearance creates a pleasing ambience, and the frames are also extremely durable. Their high-quality, robust design makes them hard-wearing, and they are easy to clean and maintain over the long term.

HIGH-QUALITY TIMBER FRAME. The elegant 3 mm edge radius **1** impresses with a modern rectangular look and a seamless edge finish. The 25 mm-thick jamb lining **2** ensures high form stability, and the premium-quality Duradecor surface finish **3** also makes the frame particularly resistant to impacts and scratches.

→ For further information, see from page 86.

ROBUST STEEL FRAME VARIOFIX. All our residential internal doors are also available with the powder-coated VarioFix steel frame. The corner joints feature high-quality welding and a flush polish. This means that there are no visible mitre cuts in the frame corners. The robust frame construction can withstand run-ins with toy cars and vacuum cleaners. Thanks to the high-quality galvanisation, even cleaning solutions cannot damage the frame.

→ Further information can be found on page 105.

MINIMALISTIC ZERO LINE FRAME.

The Zeroline frame **4** impresses with its clean lines and minimalist design, enabling a perfectly flush-fitting wall and door leaf, virtually invisible frame construction and concealed hinges. (Fig. **5** Standard frame with flush door leaf)

→ Further information can be found on page 106.

Discover a new level of interior comfort

Are you looking for premium residential internal doors in a classic or modern style, with expansive glazing, elegant accents or a cool loft design? Hörmann can give you the residential internal door that perfectly suits you and your furnishings.

**Vibrant colour
coating**

REAL LACQUER MATT. Timber doors with matt surface finishes are a current trend in high-quality interior design. We have developed our matt lacquered preferred colours precisely for this purpose. They refine modern interiors and provide for a markedly stylish ambience. The perfectly processed surface finish with an even coating and a seamless edge transition radiates simple elegance.

Vibrant colour coating

RAL to choose

REAL LACQUER. Lacquered surface finishes with slightly glossy effects make your timber doors something rather special. Customise your home with Hörmann’s residential internal doors in any RAL colour you desire. Both the door leaf and the frame have a smooth, uniform coating, including a seamless edge transition. The result is a radiant, rejuvenated ambience.

REAL WOOD VENEER

VARIANTS. Choose from nine different real wood veneer variants for your new residential internal doors. From classic to modern, to extravagant – whatever best suits your individual taste.

Listello

This horizontal real wood veneer can be supplied as White Oak matt, American Walnut matt and Smoked Oak matt, and the stripe (measuring around 18 – 28 mm) lends an extremely elegant look.

Quirin

Combining horizontal with vertical veneer grain directions creates stylish door views. This variant is available in all veneers (except for Limba matt, European Oak planked matt and Smoked Oak matt).

Versions

- Q1 with narrow vertical grain on both sides and wide horizontal grain in the middle
- Q2 with narrow vertical grain and wide horizontal grain
- Q3 with narrow horizontal grain and wide vertical grain

Black

These three modern door views are created by milled joints in a solid black top strip. This variant can be supplied in Knotty Oak matt veneer with a clear matt lacquer surface finish.

GlassLine

MORE LIGHT FOR YOUR HOME. GlassLine doors offer you many clear advantages. Glass doors are elegant and chic. They give your home an open feeling and lend each room a very special charm. GlassLine is also particularly easy to clean: all the styles with sand-blasted glass feature nano coating – so you benefit from fewer fingerprints!

Laser technique

This glass finish offers fine details and shading. The depth effect creates fascinating impressions that are further enhanced by the brilliance of the glass door.

Sand-blasting

For those who value individuality, the sandblasting technique draws delicate designs in the glass surface. The matt surface finish with nano coating guarantees fewer fingerprints.

Silkscreen

Design meets superior surface finishing: the highly scratch-resistant surface is easy to clean and resistant to soiling.

Fluted glass

The fluted glass on the glass door is created by a fine V-groove. A clear or satin-finished glass is used depending on the preferred opaqueness. The fluted glass impresses with special patterns, its tactile feel and the extraordinary play of light produced by the prism effect.

Tip

Fewer fingerprints thanks to nano coating

Tip

Particularly easy to clean

Glass type Clear

With this glass type, the glass door creates a subtle, interesting contrast. The iron oxide in the glass produces a slight "green shimmer".

Glass type Clear White

The Clear White glass type creates an almost colour-neutral transparency.

Single-pane safety glass

All glass doors with styles feature 8-mm-thick single-pane safety glass. This glass type is also available in tinted or solid matt versions, as well as in a cool loft design.

Laminated safety glass

This 10-mm-thick glass type consists of 2 panes that are firmly connected with a colour or matt plastic film.

Steel loft doors

INDUSTRIAL STYLE FOR LIVING SPACES AND

WORKSPACES. Do you value timeless elegance and modern minimalism? If so, our loft doors are perfect for you. The harmonious balance of steel and glass gives your interior design a special touch. Our loft doors are available as single- or double-leaf hinged doors or sliding doors. Add matching side elements and transom lights to create door sets measuring up to 5000 mm wide and 4000 mm high. **NEW.** The exclusive pivot doors without door frames impress with a maximum door leaf width of 2000 mm. This is a particularly elegant solution in wide passageways where otherwise double-leaf doors or doors with side elements are used.

You can optionally equip the doors with angled glazing beads or the Slim glazing bead. For the door fittings, you can choose from high-quality push bars, lever handle sets in Jet black RAL 9005 or stainless steel on request, as well as recessed lever handles.

Further information can be found in the "Steel loft doors" brochure.

TOP. Profile with glazing bead Slim (standard), viewed width 15 mm

CENTRE. Profile with angled glazing bead (optional), viewed width 50 mm

BOTTOM. Lever handle sets without rose escutcheon and a lock integrated into the door leaf emphasise the minimalist design.

LEFT. Double-leaf steel loft door with transom light, Jet black RAL 9005, angled glazing beads, lever handle Ogro design model 8155 V, Jet black RAL 9005

TIMELESS DESIGN. With loft doors, you can create a modern, subtle connection between multiple rooms, while also providing them with plenty of light. The filigree steel profile gives the design a modern line and a light appearance, while the glass adds to this overall elegant effect.

TOP LEFT. Double-leaf hinged door with optional rails

TOP RIGHT. **NEW.** Double-leaf pivot door

BOTTOM. Double-leaf sliding door with side elements

Sliding doors

TIMBER SLIDING DOOR FRAMES. Our single-leaf and double-leaf room solutions open up new possibilities for making ideal use of your living space. When fitted in front of the wall, the door leaf slides on two tracks mounted in the sliding door box. Timber sliding door frames are available in door version type A, B or C with vertical stop. Frame, sliding door box and door leaf with Duradecor ultra matt, slate, linen and real lacquer or real wood veneer surface finish create a harmonious whole. When fitted running within the wall, the tracks are fitted in an on-site door pocket in the wall. This eliminates the need for a sliding door box.

→ For further information, see from page 100.

Timber sliding door frame versions running in front of the wall

LEFT. Timber frame type C with vertical stop, running in front of the wall, Duradecor textured Grey oak, bar handle Basic round stainless steel

BOTTOM. Timber frame type C, running in front of the wall, door leaf ClassicLine Georgia 1 Duradecor White lacquer, bar handle Basic round stainless steel

STEEL SLIDING DOOR FRAMES. The complete door set with vertical stop can be fitted in front of or running within the wall. The robust frames are supplied with a high-quality powder coating. For fitting in partition walls, we recommend the version with box design. The entire sliding door system is fitted as a unit and only has to be cladded with gypsum board. Especially elegant in version HW-SL with a frame face of only 6 mm (shown at top).

LEFT. Steel frame HW-SL in box design, running in the wall, door leaf ProLine Duradecor Slate, Traffic white RAL 9016, bar handle Basic angular stainless steel

BOTTOM. Steel frame, running in front of the wall, door leaf ProLine Duradecor White lacquer, bar handle Basic round stainless steel

SLIDING DOOR SYSTEM CORVARA. With its striking rollers and stylish track profile, the Corvara sliding door system reinterprets industrial style. Matching accessories such as the flat handle in black.edition emphasise the exclusive feel.

TOP LEFT. Corvara sliding door, Duradecor Wild Oak door leaf with horizontal veneer grain direction, Flat handle black.edition

TOP RIGHT. Slide Compact sliding door with glazed side element profile black.edition, Clear grey door leaf, Flat handle black.edition, fitting in the reveal

BOTTOM RIGHT. Slide Compact sliding door with vertical stop, GrooveGlass 85 door leaf, recessed handle 6402 stainless steel, fitting in front of the reveal

SLIDING DOOR SYSTEM SLIDE COMPACT. The track profile for the sliding door leaf is available in the surface finishes matt stainless steel, Jet black or White. The profile can be fitted both in front of the wall and in the reveal. With a glazed side element, the system presents a translucent, space-saving door solution for wide passages. For a door leaf weight of up to 60 kg, the Slide Compact system is equipped with a SafeClose in order to gently close the door leaves.

→ For further information, see from page 100.

Special doors and frames

REVERSE-OPENING DOORS. This door version boasts a flush-fitting transition between door leaf and frame on the hallway side, while simultaneously opening through the frame into the room beyond. As with flush-closing doors, you can achieve an eye-catching door view in the hallway.

→ For further information, see from page 107.

LEFT. Reverse-opening door set, flush-closing timber door with reveal rebate, real lacquer Traffic white RAL 9016, lever handle Linea matt stainless steel

RIGHT. Flush-closing timber door with Zeroline frame, real lacquer Traffic white RAL 9016, lever handle Linea Black matt

ZEROLINE FRAME. The Hörmann Zeroline frame is the perfect choice for all connoisseurs of clear design language. The cleverly conceived structure captivates with a minimalist design that enables a flush-fitting door leaf and features a virtually invisible frame construction owing to a frame face of just 2 mm, plus concealed hinges. The result is a door / frame combination that meets even the most exacting design demands.

→ For further information, see from page 106.

Function and construction project doors

TIMBER CONSTRUCTION PROJECT DOORS. For all requirements in commercial and residential construction, our timber doors can be equipped with additional functions such as fire protection, security or acoustic insulation. Doors are especially exposed to stress in schools, nurseries, offices and hotels. To meet these demands, we have developed our premium-quality DuraProject door surface finish that offers the same product properties as an HPL surface.

→ For further information, see from page 110.

RIGHT. Timber double-action door HPH-180 with profile frame

BOTTOM. Flush-closing timber door, DuraProject White lacquer, lever handle Lucia Professional

Functions at a glance

Fire and smoke protection

Fire protection can save lives! A suitably equipped door can protect against penetrating flames (for at least 30 or 90 minutes) as well as prevent the penetration of dangerous combustion gases. Fire-rated / smoke-tight door sets are only available as a complete package which includes the door frame and all door fittings.

Acoustic insulation

Acoustic-rated doors are in demand in places where it can be very loud in apartments or offices. The connection between the door and frame is crucial here. It is an essential component for guaranteeing the required acoustic insulation.

Feeling sure and secure

Suitable special functions can significantly reduce the risk of burglary. Hörmann recommends resistance class RC 2 or, even better, RC 3 for apartment entrance doors.

Climatic class 3

Doors in this class feature a special door leaf construction that balances the temperature and moisture differences between rooms with different uses, such as between an unheated cellar and a warm hallway.

Double-action doors

Double-action doors are particularly suited to situations where there is no 'free hand', such as when serving food and drinks in restaurants and canteen kitchens: they open smoothly and easily. The HPL or timber double-action doors are a real eye-catcher for catering and shopfitting applications.

For further information on double-action doors, see the brochure.

CLIMATE AND APARTMENT ENTRANCE DOORS. For multiple-occupancy dwellings, our doors offer high acoustic insulation levels, a reliable function even when temperatures in the hallway differ from those inside the rooms, plus certified security. Choose from three equipment packages for added security and convenience.

→ For further information, see from page 110.

GARAGE CONNECTING DOORS. Fire protection of at least 30 minutes is required by law at the point where the garage transitions to the living area. The standard smoke protection offers protection from exhaust fumes and the optional acoustic insulation function helps block out intrusive engine noise. The garage connecting door is equipped with RC2 security features as standard. The optional RC3 equipment provides extra security.

→ For further information, see from page 110.

Accessories

DOOR OPERATOR PORTAMATIC. Open and close your residential internal doors easily and automatically via a hand transmitter or button. Whether you are physically disabled or would simply like more convenience, this technology is sure to make your everyday life easier. The door operator PortaMatic not only features an array of functions and settings but also minimal power consumption. In addition, the PortaMatic is up to 25% cheaper than similar door operators and can be subsidised up to 100% by your nursing care insurance.

Find out more about support options at
www.hoermann.de

Further information can be found in the "Door operators" brochure.

DOOR LOCK OPERATOR SMARTKEY. Easily open your door lock at the press of a button with your hand transmitter, radio internal push button or directly via the sensor field on the SmartKey. So there's no need to put down your shopping in order to open your door. Even with a walker, wheelchair or pram, it is much easier to enter your house or apartment because you can open the door from a distance. Locking takes place either by pressing a button or automatically after a specified period of time. This securely locks your door and provides the greatest possible protection against burglary.

Variants for lever handle and lock rose escutcheons

Lever handle and lock sets are a defining element for the overall appearance of your residential internal door. Hörmann offers different variants of the lever handle sets shown:

S STANDARD ROSE ESCUTCHEON. The approx. 10 mm thick lever handle and lock rose escutcheons are surface-mounted on the door leaf.

F FLAT ROSE ESCUTCHEON. This flat rose escutcheon shape adds just 3 mm, resulting in an elegant door view.

P PLANAR. Perfectly inset in the door leaf, the fully flush-fitting Planar rose escutcheons are especially impressive for fans of design.

Another fine detail is the omission of the drilled key hole, allowing the design the look even more minimalistic and therefore more elegant.

Door fittings and lever handle sets

For sliding doors

Slide Compact sliding door system

The profile of the sliding door system Slide Compact is supplied as standard in matt stainless steel (shown, left) and optionally in matt Jet black (shown, centre) or White (shown, right).

Sliding door system Slide Compact with additional vertical stop (stainless steel colour) for single-leaf doors, running in front of the wall

Sliding door system in the frame

With the brush on the door leaf (shown on left) and the inlet seal in the frame (shown on right), the sliding doors with frame type C running in front of the wall offer optimum protection against odours, noise and draughts – for even more comfort in your own home.

For sliding doors running within the wall, you can use a trip handle to release a door leaf completely concealed in the wall and close the door at the push of a button.

Bar handle pair U-grip, round, matt stainless steel

Bar handle pair U-grip, angular, matt stainless steel

Bar handle combination Combi, flat handle

Door and frame types

Custom design and function

Rebated version with round edges

If you value a harmonious overall design, you can't go wrong with this version: The door leaf rests on the frame and has rounded door leaf edges for a harmonious appearance. The rebated door view with round edges is available for all timber doors, except DesignLine Stripe and ClassicLine Montana.

Rebated version with angular edges

If you appreciate a particularly streamlined look, then we recommend this version. The door leaf rests on the frame and has a beautifully designed, angular edge. It is available for all timber doors except for ClassicLine Carolina. In the Duradecor surface finishes with 4Protect edge guard and in the lacquer surface finish, this version boasts a perfectly seamless look.

Flush version

Are you looking for an exclusive door view in your home, with a virtually flush-fitting transition to the frame? Then we recommend a flush-closing door leaf, which harmonises particularly well with modern interior design concepts. This version is available for all timber doors with the exception of ClassicLine Carolina. In the Duradecor surface finishes with 4Protect edge guard and in the real lacquer surface finish, this version impresses with a perfect seamless look.

Horizontal view of door leaf

Horizontal view of door leaf

Horizontal view of door leaf

4Protect edge guard

The quadruple edge guard offers impressive features:

1. High impact resistance
2. High wear resistance
3. High scratch resistance
4. Seamless look, meaning that unlike conventional doors, no unsightly edge disturbs the high-quality door view.

Rebated version with angular edges

Flush version

Contrasting edge 4Protect

The 4Protect contrasting edge in 6 colours gives timber doors with the Duradecor surface a special finishing touch.

Door and frame types

Custom design and function

- Honeycomb insert**

The honeycomb is a door inlay that retains its shape and has an excellent price-performance ratio.
- Tubular chipboard spacers**

The door inlay consists of individual spacers that are arranged in the best possible layout. This means the door leaf is especially sturdy and suitable for heavy wear.
- Tubular chipboard plate**

The solid plate with horizontal tubes gives the door leaves a high surface stability. These high-quality residential internal doors are suitable for even extremely heavy wear.
- Solid chipboard**

The high-quality solid chipboard door leaves have the highest leaf rigidity and are suitable for particularly heavy wear. Doors with glazing cut-outs are available with solid chipboard as standard.

- Profile frame**

With rounded edges
- Profile frame**

With angular edges (only for lacquer surface)
- Profile frame**

With profiling for ClassicLine Georgia and Carolina
- Block frame**

For fitting in the opening or **fascia frame** for fitting in front of the wall

90° DOOR FRAME

If you appreciate a highly linear door view, we recommend our 90° door frame. Unlike a frame with a mitre cut, the frame cladding used in this case has vertical edges. This results in a particularly harmonious look when combined with classic door styles. This option is also available with a high-quality stainless steel cover plate for flush and rebated timber doors with a brilliant real lacquer surface finish.

Steel frame VarioFix

The perfect combination of design, robustness and a long service life

High-quality design

For the steel frame VarioFix, the corner joints feature high-quality welding and a flush polish, meaning there are no visible mitre cuts in the frame corners. In flush-closing doors, the robust construction guarantees a uniform gap dimension, as the frame can no longer warp after fitting.

Ideal combination

The steel frame harmonises perfectly with other timber frames due to a frame face of 55 mm on both sides. To match our door leaves in Duradecor White lacquer and real lacquer Traffic white, the VarioFix frame is available in Traffic white RAL 9016 with a white sealing profile or in RAL as desired. The frame can be combined with glass or timber door leaves.

Particularly long-lasting

Thanks to the high-quality powder coating, the frame can withstand run-ins with toy cars or vacuum cleaners, and any damage to the surface is easy to repair. Even cleaning water and a thorough washing cannot damage the frame.

Fast fitting

The VarioFix steel frame can be fitted to all wall types without screw fitting, using 2C foam, like a timber frame. This results in time savings of up to 50% during fitting compared with standard steel frames. Wall tolerances of up to 20 mm are no problem for the steel frame VarioFix. The adjustable decorative rebate easily compensates for different wall thicknesses during renovations and new construction projects.

ZeroLine frame

Clean design for modern living space concepts

The beauty of the invisible

If you value clear design language and appreciate clean, modern design, then the Zeroline frame is the perfect choice. The minimalist appearance impresses with a flush-fitting door leaf, virtually invisible frame construction owing to a frame face of just 2 mm, plus concealed hinges. This door leaf / frame combination is a perfect fit for ambitious designs.

Frame with fabric as standard

The frame is equipped as standard with a woven fabric tape which is applied to the plaster to prevent crack formation. This completely integrates the frame into the wall.

Flush-fitting skirting boards

Skirting boards to match the frame and onto which the plaster can be directly applied are available. Skirting boards can therefore be integrated flush into the wall.

Additional use of a flexible woven fabric prevents cracks from forming in the plaster.

Equipment features

- Flush-closing door leaf
- 45 mm door leaf thickness
- Concealed hinges
- Magnetic catch lock

Nominal sizes

Max. height: 2250 mm

Max. width: 1250 mm

Horizontal sectional view with flush-closing door

Reverse timber door

The door has a flush-fitting view on the hallway side

Opens through the frame into the next room

If you require a matching, flush-fitting door view on the hallway side and the doors need to open through the frame into the room beyond – and not into the hallway as usual – then we recommend our reverse-opening doors (as shown, bottom right).

Elegant appearance

Concealed hinges emphasise the minimalist, modern door view.

Easy to combine

Due to the identical appearance of the door leaf and frame with flush-fitting transition, reverse-opening doors can be readily combined with flush-closing doors in the same room or hallway. This results in a harmonious and welcoming overall ambience.

Equipment features

- Flush-closing door leaf with reveal rebate
- 45 mm door leaf thickness
- Concealed hinges
- Magnetic catch lock
- Opening limiter

Nominal sizes

Max. height: 2489 mm

Max. width: 1174 mm

The reverse opening door (left-hand hinged) opens into the room **1** and the normally opening flush-closing door (right-hand hinged) opens into the hallway **2**
