

**Out Now!**

### The next generation of door gear

Woodrite Doors is delighted to launch its new up and over chassis and door gear. The new cloaked chassis and gear brings all the benefits of a super-strong chassis and ultra-reliable lifting gear, yet from the front all you see is beautiful timber - the chassis is fully concealed - stealth technology comes to Woodrite doors!

Standard Chassis Door Edge

Woodrite Chassis Door Edge!

The front face of the door - no visible chassis!

**the new super chassis for extra strength**

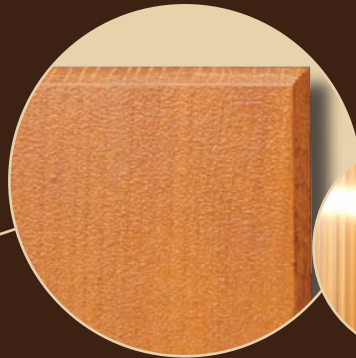

The substantial corrosion protected chassis that is the foundation for the new door construction gives extra strength but doesn't compromise the doors good looks from the outside.

Timber framed doors have edge to edge timber and doors with a steel frame have a steel top edge that acts as a slam strip, closing behind the door frame head.

The chassis profile is extremely rigid and removes the need for additional bracing plates and cross bracings for a very neat interior.

The UK's finest timber door range improves... Again!

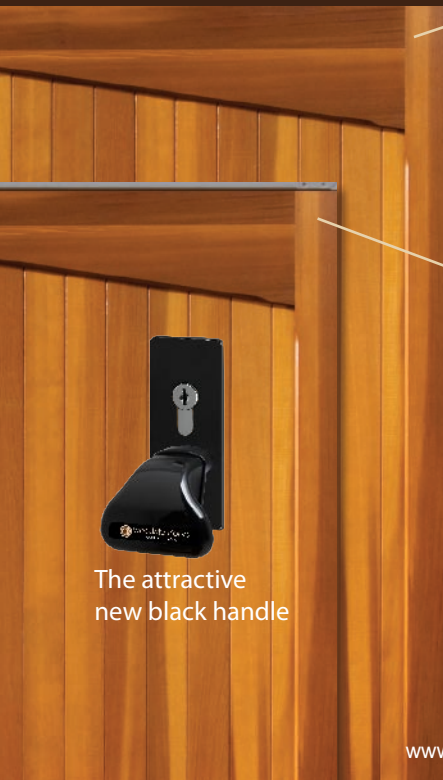

Edge to edge timber on timber framed doors

The chassis edge flush with the door panel

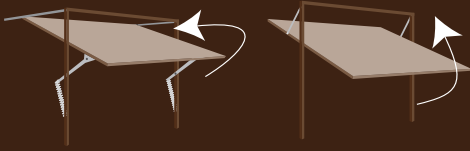

Top edge slam strip on steel framed doors, concealed behind the frame head

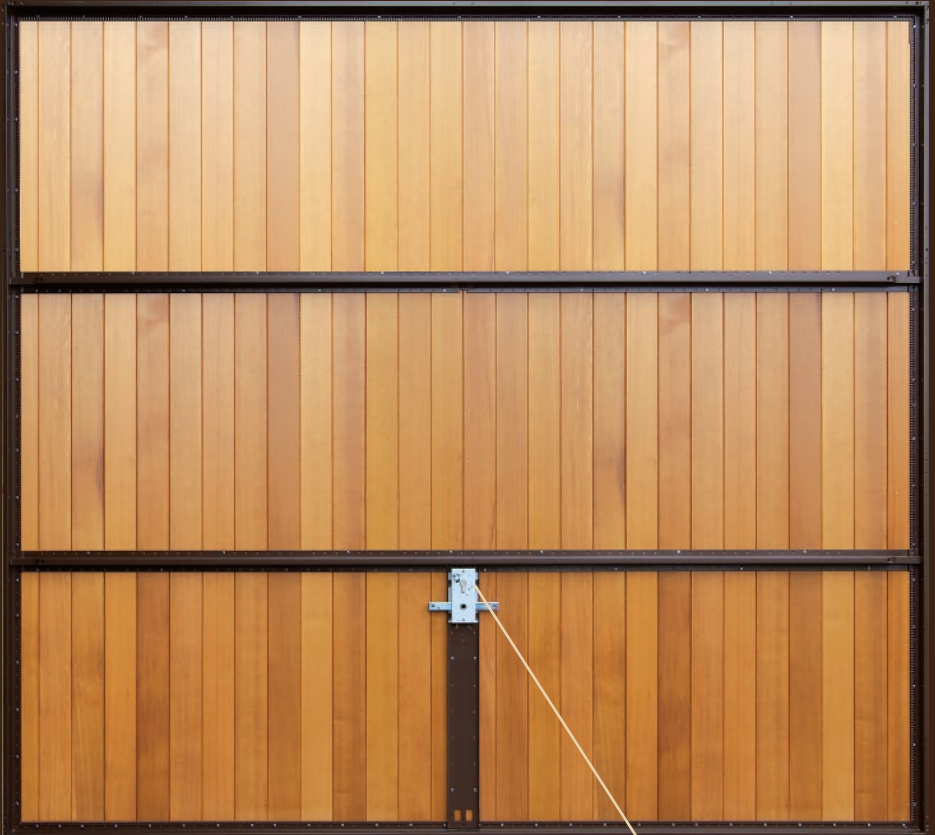

The attractive new black handle

**the new super chassis**

Doors are available with both canopy and retractable lifting gear. Frames are available for all doors in softwood or hardwood (70mm) and steel (75mm retractable gear, 60mm for canopy gear)

**SUPER CHASSIS**

Super-strong corrosion protected chassis

Lock body with multi-point locking

**is for extra strength**

**coming soon...  
the country house solid panel range**
